

2. Google Scholar

You can see the number of times an article has been cited by searching for it in Google Scholar – the number of times cited (including the Web of Science results) display on the results list:

The screenshot shows the Google Scholar interface. At the top, there are tabs for 'Web', 'Images', and 'More...'. Below that is the Google logo and a search bar. The 'Scholar' tab is selected. A search result is displayed for the article 'Children's use of a verbal-nonverbal consistency principle to infer truth and lying' by KJ Rotenberg, L Simourd, and D Moore. The article title is in blue, and the authors and journal information are in green. The abstract text is in black. The phrase 'Cited by 39' is circled in orange, and a large orange arrow points to it from the right. Other links like 'Related articles', 'All 6 versions', 'Web of Science: 23', and 'Import into RefWorks' are also visible.

Click on the 'Cited by...' link to view all publications which have cited the named article.

3. LibrarySearch

You may also see the number of times an article has been cited from the [LibrarySearch](#) results list.
